

The user clicks a “Make Public” button on the Sample Details page. This pops up.

This initial popup assumes that users would know this info at the start. Does that make sense? Would they break it out like this?

Make D15 Public

Which of D15’s related data should also be made public?

All

None

Some

Subsamples

Chemical Analyses

Image Maps

Drag the data to the desired column.

Cancel

Make Public

Simple enough. But if *any* of the items are in the “Some” column...

Make D15 Public

Which of D15’s related data should also be made public?

All

None

Some

Subsamples

Image Maps

Chemical Analyses

Drag the data to the desired column.

Cancel

Select Data

Clicking on [Select Data] will lead to this (in the same popup window):

Is this the best order of columns? Are these the right data to show?

Make D15 Public

Please select any additional data you would like to also make public.

Make Public

Clicking the thin section links will open a tooltip with the image thumbnails

When a Subsample is checked it is automatically expanded to show chem. analyses and image map. When it is unchecked it is collapsed.

Subsamples with no chemical analyses will not expand.

Can a subsample have an image map with no chemical analyses? If so, what purpose does this image map serve the user?

Expanding one of the Subsample’s Chemical Analyses list:

Is this the best order of columns? Are these the right data to show?
